DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 & 24-27 rejected under 35 U.S.C. 102(b) as being anticipated by Roye or Lien.

Re claims 1-3 & 24-27, Roye discloses (column 2, line 41 - column 3, line 39) an arrangement for forming a digital representation of an image in which objects ("slices") are grabbed, trivial gaps are separated from significant information, the significant information is retained while the trivial gaps are discarded, and a reduced noise version of the image is generated containing only the former.

Re claims 1-3 & 24-27, Lien discloses (column 2, line 55 - column 3, line 11) an arrangement for forming a digital representation of an image in which objects (arc vectors, line vectors, or filled shapes) are grabbed, objects which can be merged into other objects are merged into combined objects, the significant information (non-mergeable objects and merged

objects) is retained while the individual objects that form merged objects are discarded, and a reduced noise version of the image is generated containing only the former.

Allowable Subject Matter

3. Claims 4-23 are allowed.

4. The following is a statement of reasons for the indication of allowable subject matter:

Re claims 4-5 & 22-23 (and dependent claims 6-21), the art of record does not teach or suggest the recited arrangement of determining a line skew angle in relationship to objects determined to be representative of essential image data.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bose et al, Sawada et al, Murayama, and Shimizu disclose additional examples of image feature extraction.
